Skills

JavaScript, TypeScript

ReactJS, React-Native

NodeJS, MongoDB

SQL, Python, C++

Languages

Spanish · native

English · intermediate

German · intermediate

Interest

Mountainbike, hiking and outdoor activities.

ABOUT ME

Electronic engineer with experience in the automotive industry, recently working as a development engineer and eager to continue improving.

Why frontend? I consider myself a perfectionist with the details, I enjoy seeing the evolution of the project and interacting with my code, I am organized and I like to keep the code clean and reusable.

I'm currently working mainly with React and TypeScript.

EXPERIENCE

Frontend Developer (React)

WAGMI venture studio | September 2022 – Present

- Frontend web application development (React and Typescript) for analysis of decentralized Web3 applications and IA's chat customizations.
- Actively participating in the Project from its beginning.

Context provider – Recharts – Reactflows – Material UI (MUI)

SEAT automotive testing engineer

Ferchau Engineering | Jun 2017 – November 2021

- Management and performance of functional, durable and fatigue test for SEAT and AUDI for multiple departments with cockpit, console, interior, trunk and bumper parts.
- Analyse and report testing results, search for solutions and optimizations of parts.
- Make protocols tests and reports for release and homologate the project.

Technical warehouse support at BMW

EDAG Engineering | July 2016 – May 2017 | Munich (Germany)

- Management, calibration and maintenance of sensors, cables and electronic components for development testing cars.

EDUCATION

Bootcamp Web Developer

Neoland | April 2022 – Jun 2022

- HTML, CSS, Javascript, ReactJS, React-Native, NodeJS, MongoDB
- Final project: Web application and social media designed for register and share sport activities with data visualization in real time.

CS50 Introduction to Computer Science

Harvard University · edX | February 2022

- C++, Python, SQL

Degree in Electronics and Automatic Control Engineering

Universidad Politécnica de Cataluña | September 2010 – Jun 2016

- Final project: Audio board for Arduino DUE capable of processing high resolution audio data (24bits, 48Khz) in real time.
